DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group I in the reply filed on 1/31/2005 is acknowledged.
2. Note that claim 6 is a repeat of claim 5. Correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 5, 6, 7, 9, 10, 13, 14, 16, 17 are rejected under 35 U.S.C. 102(b) as being anticipated by hay et al (US 5,632,282).

As to claim 1, Hay et al disclose a method for determining optical status of each individual eye of a pair of eyes of a subject comprising the steps of (fig.3):

- A) Imaging both of said pair of eyes using a digital imaging device while utilizing a standard set of uniform imaging conditions and visual tasks while performing said imaging (column 12, lines 11-21),
- B) Isolating a retinal reflex from each of said pair of eyes (column 12, lines 11-21),
- C) Applying a series of algorithms to statistically determine a plurality of parameters related to each said retinal reflex (fig.12a-b).

As to claim 5, Hay discloses comparing said plurality of parameters from each said retinal reflex taken from said individual to a like set of parameters taken from a normal eye (see abstract lines 4-7).

As to claim 7, Hay discloses comparing said plurality of parameters from one of said retinal reflexes taken from said individual with parameters from the other of said retinal reflexes taken from said individual (see abstract lines 8-10).

As to claims 9, 10, Hay et al disclose superimposing said plurality of parameters from one of said retinal reflexes taken from said individual over said parameters taken from a normal retinal reflex (column 15, lines 35-65 and fig. 9c).

As to claim 12, Hay et al disclose selecting said algorithms based on their predictivity of eye disorders (fig. 12c).

As to claim 13, Hay et al disclose selecting said algorithms based on their predictivity of ocular balance between said retinal reflexes (fig.2b).

Claims 14 and 16-17 are similarly analyzed and rejected.

Allowable Subject Matter

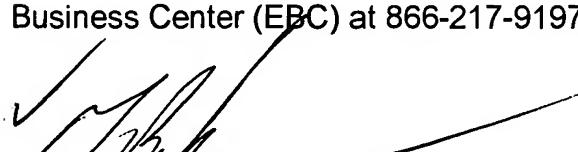

5. Claims 2-4, 8, 11, 12, 15 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
